

## QUALITY POLICY

**NUOVA SIMACH S.r.l.** **NUOVA SIMACH S.r.l.** wants to be a reference point for cold stamping and assembly of metal components intended for various industrial sectors, such as automotive, household appliances, electronics and aeronautics; In this respect, it guarantees an integrated path from prototype development, the manufacture of tools and equipment, to series production. The growth strategy is to put at the center of the relationship with the Customer, aiming to satisfy his needs and increase over time his degree of satisfaction and loyalty. Nuova Simach defines the following guidelines on which to base its targets:

- **The full satisfaction of its customers and relevant stakeholders** by ensuring the supply of compliant parts in compliance with all specific requirements and delivery on time;
- **The constant support to the Customer in terms of:** shared innovative technological solutions, flexibility and timeliness of reaction;
- **Continuous improvement of processes, services and working** conditions through data analysis, performance monitoring and targeted improvement plans;
- **the satisfaction and continuous growth of all human resources**, through training plans and dedicated programs, aimed at increasing competence, involvement, awareness and professionalism of all staff at various levels;
- **the continuous updating of technologies** with attention to the working environment and the efficiency of production processes;
- **Support for specialized and reliable suppliers** with well-established partnerships in terms of quality and service;
- **compliance with the applicable regulations**, especially those related to product, ethics and sustainability, environmental protection, safety and health at work, data and information confidentiality.
- **the continuous analysis of internal and external factors, the context and relevant stakeholders, the risk and opportunity analysis**, reviewed annually during the Management Review.

The above mentioned target must be achieved through the implementation and continuous improvement of a Quality Management System in accordance with IATF 16949 for the automotive sector, EN 9100 for the aerospace sector, ISO 9001 for the industrial field in general.

This Quality Policy has been disseminated to all staff and is reviewed annually at the Management Review.

The Quality Policy is also made available to relevant stakeholders via the website.
